RECORDS OF DUFIOUREA MAURA (HYMENOPTERA: HALICITIDAE) FROM ISLE ROYALE NATIONAL PARK, MICHIGAN

Michael S. Arduser

ABSTRACT

Dufourea maura is recorded from Isle Royale National Park, Michigan. This is the first report of this western North American species east of the Great Plains states.

Recent examinations of specimens in the Entomological Research Collection of Michigan State University and The University of Michigan Museum of Zoology, uncovered 31 specimens of Dufourea maura (Cresson) from Isle Royale National Park, Michigan (Keweenaw County). According to Hurd (1979) and George E. Bohart (pers. comm.), D. maura is primarily a species of the western United States, occurring as far east as North Dakota and Nebraska. The Isle Royale collections include 27 males and four females, taken between 2–27 July in various years. One male was collected from flowers of Campanula rotundifolia L.

No biological data have been published for D. maura other than Stevens' note (1919) that the species is a "fairly common bee at flowers of Campanula rotundifolia" in North Dakota. Given the oligolectic nature of other species in the genus (Bohart, pers. comm.), it seems possible that D. maura may restrict its pollen collecting to the flowers of Campanula rotundifolia and related species. C. rotundifolia is a widely distributed species that is relatively common on Isle Royale, found on moist, exposed, sandy or rocky substrates.

These appear to be the only records of Dufourea maura in the eastern United States. Despite much collecting on the mainland of the Upper Peninsula of Michigan in the past several years by the author and others, no additional collections of this species have been made.

ACKNOWLEDGMENTS

I would like to thank Roland L. Fischer, Michigan State University Entomological Museum, and Mark F. O'Brien, The University of Michigan Museum of Zoology, for permitting me to examine some of the specimens in their care. Thanks are due George E. Bohart, USDA-ARS Bee Biology and Systematics Lab, Logan, Utah, who confirmed the identity of D. maura, and John K. Bouseman, James H. Hunt, Mark F. O'Brien, and George E. Bohart for reading the manuscript.
